

## 20.2.8 Footstep Journal Bearing

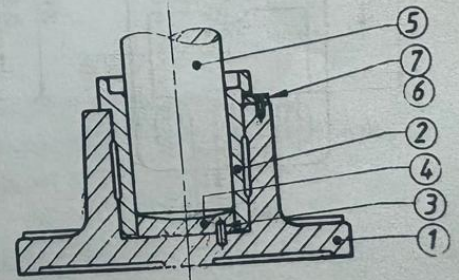

Fig. 20.15 shows a simplest type of Footstep Journal Bearing. Its component details are shown in Fig. 20.16. It consists of a supporting bracket—Part No.1, a gun metal bush—Part No.2, a pin—Part No.3, a thrust pad—Part No.4, a locking plate—Part No.6, a CSK screw—Part No.7 and a shaft—Part No.5. The bush has a flat face formed in the collar on its circumference. The locking plate when fitted by the screw to the supporting bracket butts against the flat face formed in the bush and thus prevents the rotation of the bush along with the shaft. The pin which is fitted partly to go into the thrust pad, and partly to go into the supporting bracket prevents the rotation of the pad along with the shaft.

### Exercise

Fig. 20.16 shows the details of a FOOTSTEP JOURNAL BEARING. Draw to 1:1 scale the following views of the assembled bearing.

1. Front view showing right half in section.
2. Top view.

Indicate the title — FOOTSTEP JOURNAL BEARING and the scale. Add the item list.
